

# Composite Doors

## Making the Perfect Entrance

Our entrance door systems, although looking like traditional timber doors, are manufactured using a high-quality, precision-engineered, composite door slab, to create a finished door which will last the test of time and looks stunning.

All our doors are custom made and you can choose from a range of 8 colours, 15 glazing configurations and 10 glass ranges creating many possible permutations and allowing our customers to have a unique door set.

Our entrance doors are manufactured from 2mm through compression moulded Glass Reinforced Polymer (GRP) which is bonded to a composite frame and filled with an environmentally-friendly, CFC- Free Polyurethane foam core. This door is then trimmed to exact size and fitted into a maintenance free PVCu frame. All our doors have high security multi-point locks as standard and we offer a wide variety of Glazing and Door Furniture options to allow you to personalise your new entrance door.

### Traditional Look

We offer a range of traditional door styles to suit most tastes. The high-definition embossing of the GRP skins give a real wood look and mouldings give the feel of a traditional timber door.

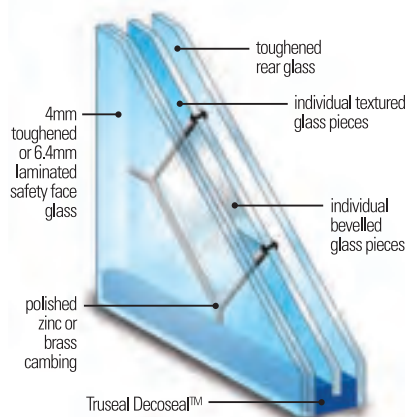

## Glazing Options

Most of us consider the entrance to our home important enough to be that special focal point, reflecting our very own personal style and taste. Drawing on many years experience of selling decorative glass in windows and doors, we have developed a range of stunning glazing options which, we believe, will provide you with all the choice you need to enhance and personalise your composite door. Our range of glass options covers both traditional and contemporary designs to suit most tastes and budgets.

### Triple Glazed Brass/Zinc Art Range\*

#### Clarity, Elegance and Simplicity designs

Our Triple Glazed designs are constructed using hand-cut bevels and textured glass pieces, which are then assembled using traditional stained glass methods into a Zinc or Brass cambs. This is then encapsulated between two pieces of tempered safety glass to give excellent thermal and sound insulation with the added benefit of an easy to clean smooth surface.

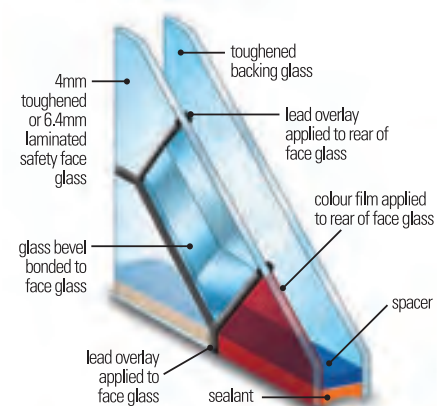

\*Clarity-Brass Art Only, Elegance/Simplicity-Zinc Art Only

### Twin Glazed Overlay Art Range

#### Crystal Harmony and Diamonds designs

Created by applying high quality colour stable film to the glass surface with authentic lead lines to replicate original leaded lights but with greater strength and thermal efficiency. Hand-made bevelled glass shapes offer a 3-dimensional quality to the glass. Colour film changes are possible (see page 18) and a range of textured backing glasses are available offering varying levels of privacy.

### Maintenance Free

The construction of the door and the materials used ensure that the door will not warp, crack or twist like traditional timber doors. All our entrance doors come with a 10 year guarantee.

### High Security

Our entrance doors are manufactured from high-impact resistant materials to offer high levels of security. All doors are supplied with a Multi-Point locking system as standard. Doors are certified to British Standards PAS023 (weather performance) and PAS024 (enhanced security) and are approved by Secured by Design.

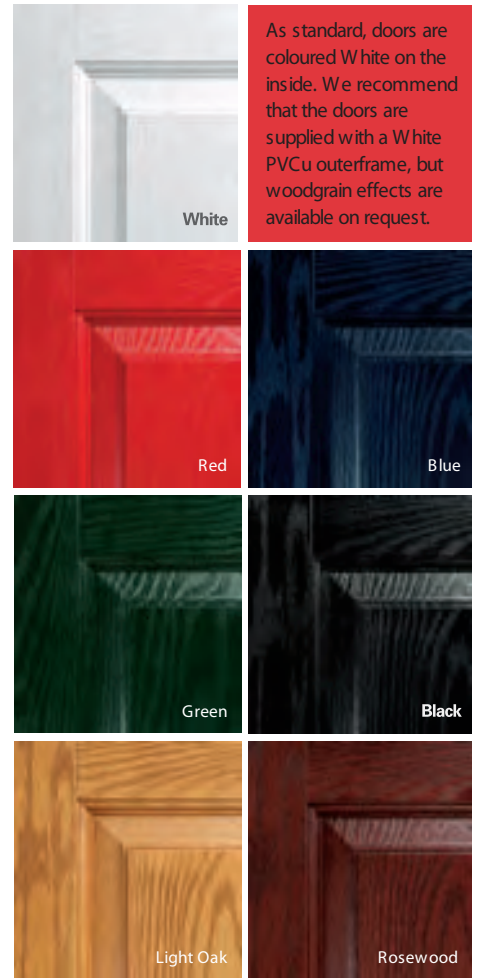

### Energy Efficient

All Glazing is a minimum double glazed and the Brass/Zinc Art products are triple glazed for extra efficiency. The Polyurethane core gives excellent heat insulation and the door offers more insulation than either PVCu or Timber doors. With our PVCu outer frame and precision manufacturing specifications, we can guarantee a tight seal between frame and door to ensure no draughts or heat loss.

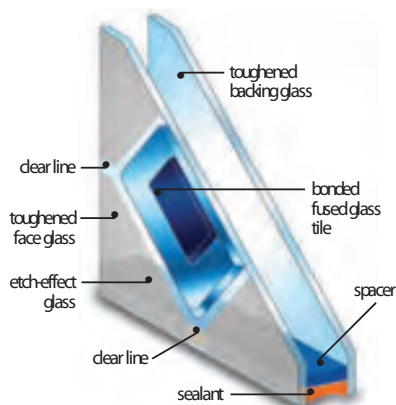

## Door Colour Options

As standard, doors are coloured White on the inside. We recommend that the doors are supplied with a White PVCu outerframe, but woodgrain effects are available on request.

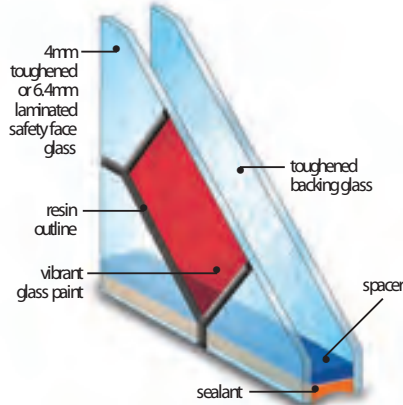

### Twin Glazed Fusion Art Range

Elba design  
Fusion Art is a clean, contemporary look where individual pieces of kiln-fused glass tiles are bonded to the external face of a traditionally etched glass surface. Our Elba design is available in a range of 4 colourways (see page 18) to match most coloured doors. As the designs are made using etched sandblast glass, patterned backing glasses are therefore not required.

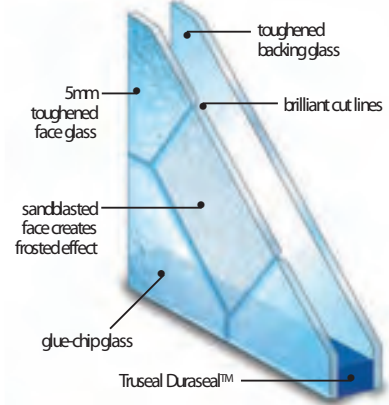

### Twin Glazed Resin Art Range

Fleur design  
Our Resin design is manufactured using state-of-the-art resin dispensing equipment to create an outline of the design, then the colours are hand-painted to create the finished effect. The resins offer an alternative to lead profiles and create much finer lines. The design in this brochure is shown with our popular Pewter coloured outline.

### Twin Glazed Etch Art Range

Brilliance design  
Etch Art is a new, innovative glass decoration technique which combines the traditional use of handmade glue-chip glass and sandblasting, with modern computer-aided brilliant cutting. Due to the style of glass and the manufacturing techniques used, it is not possible or necessary to use textured backing glasses.
